Customer Journey Map

Date	31 January 2026
Team ID	anshrathore0202-cyber
Project Name	F1 Racing Intelligence Analysis
Maximum Marks	2 Marks

Customer Journey Map: Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1: Data Discovery & Exploration	Stage 2: Pipeline Setup & Data Cleaning	Stage 3: Interactive Visual Analysis
Actions What does the customer do?	Searches online repositories and Ergast/F1 databases for historical lap times, driver standings, and constructor results.	Sets up VS Code workspace on Windows, creates Python data scripts to clean raw CSV files, and structures relational tables.	Connects cleaned F1 dataset to Tableau, creates interactive charts, and explores historical trends and driver head-to-head comparisons.
Touchpoint What part of the service do they interact with?	Public F1 APIs, raw CSV files, Kaggle / Ergast data portals.	VS Code environment, local file paths (`C:\Users\HP\Desktop\F1-Analysis`), GitHub repo.	Tableau Desktop dashboard, interactive filters, performance trend cards.
Customer Thought What is the customer thinking?	"Where can I find complete, multi-season F1 datasets with accurate lap-by-lap telemetry?"	"Handling null values, inconsistent driver IDs, and formatting race timestamps is very tedious."	"Now I can visually correlate qualifying performance with Sunday race finishes across seasons!"
Customer Feeling What is the customer feeling?	**Curious & Hopeful** Excited to find deep insights, but cautious about data quality.	**Frustrated & Overwhelmed** Stressed by data inconsistencies and missing pit-stop records.	**Satisfied & Empowered** Thrilled to see clear, interactive charts revealing racing stories.

Customer Journey Map (Continued)

Phase of Journey	Stage 1: Data Discovery & Exploration	Stage 2: Pipeline Setup & Data Cleaning	Stage 3: Interactive Visual Analysis
Process Ownership Who is in the lead on this?	**Data Researcher / F1 Domain Lead** (Ansh Rathore)	**Data Engineer & Pipeline Specialist** (Ansh Rathore)	**BI & Visualization Analyst** (Ansh Rathore)
Opportunities How can we improve this stage?	• Automate API ingestion scripts to fetch latest Grand Prix telemetry automatically. • Establish clear dataset documentation and schema mapping early.	• Build automated ETL cleaning scripts in Python with standardized column naming. • Add data validation rules to detect missing lap times and zero values.	• Create predefined Tableau dashboard templates for season-over-season driver comparisons. • Embed interactive tooltips explaining strategy decisions and weather impacts.
