Maximum Marks	2 Marks

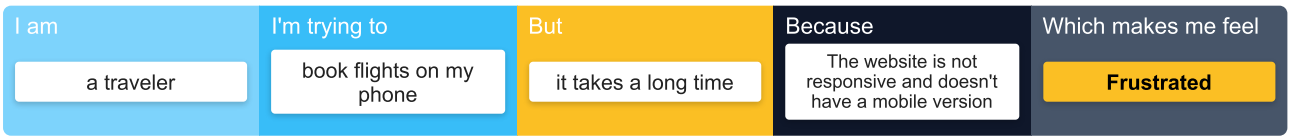

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am *Describe customer with 3-4 key characteristics - who are they?*	An F1 Data Analyst & Motorsports Enthusiast tracking historical race telemetry, driver standings, and constructor metrics.
I'm trying to *List their outcome or "job" they care about - what are they trying to achieve?*	Analyze historical Grand Prix results and visualize driver vs. constructor performance trends in one consolidated view.
but *Describe what problems or barriers stand in the way – what bothers them most?*	F1 data is scattered across fragmented tables, raw CSVs, and non-interactive static graphics.
because *Enter the "root cause" of why the problem exists – what needs to be solved?*	There is a lack of unified, interactive analytics dashboards connecting lap times with high-level championship metrics.
which makes me feel *Describe the emotions from the customer's point of view – how does it impact them emotionally?*	Frustrated by tedious manual data cleaning and unable to extract deep racing insights quickly.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An F1 Strategy & Performance Analyst	Evaluate long-term driver progression and lap-by-lap race pace across multiple seasons	Raw statistical datasets require extensive manual filtering and lack visual correlation	Existing repositories don't integrate interactive visualization tools like Tableau directly	Overwhelmed and inefficient
PS-2	A Motorsports Fan & Data Storyteller	Explore constructor dominance trends and qualifying vs. race-day performance metrics	Static tables make it difficult to spot dynamic patterns or compare historical eras	Data is stored in isolated CSV files without an end-to-end intelligence pipeline	Disappointed by flat insights
